

**CRAWL SHIELD**

# Vapor Barrier

Class "A"  
High puncture resistance  
High tensile strength  
Low water vapor permeance

**16-Mil**

## Crawl Space Application

Crawl Shield will prevent crawl space moisture from rising into the home or building.

A dirt crawl space is typically saturated with moisture. Since warm air rises, the moisture in the crawl space will rise and enter the home or building. Installing a vapor barrier provides the crawl space with a moisture protection layer to protect the structure from the negative effects of moisture such as mold, floor failure, increased electricity costs, odors, insects, and dust mites. Moisture effects can also cause or worsen conditions such as asthma, hay fever, and or other allergies.

### Crawl Shield Advantages

Inhibits the migration of moisture and soil gas. (Radon)

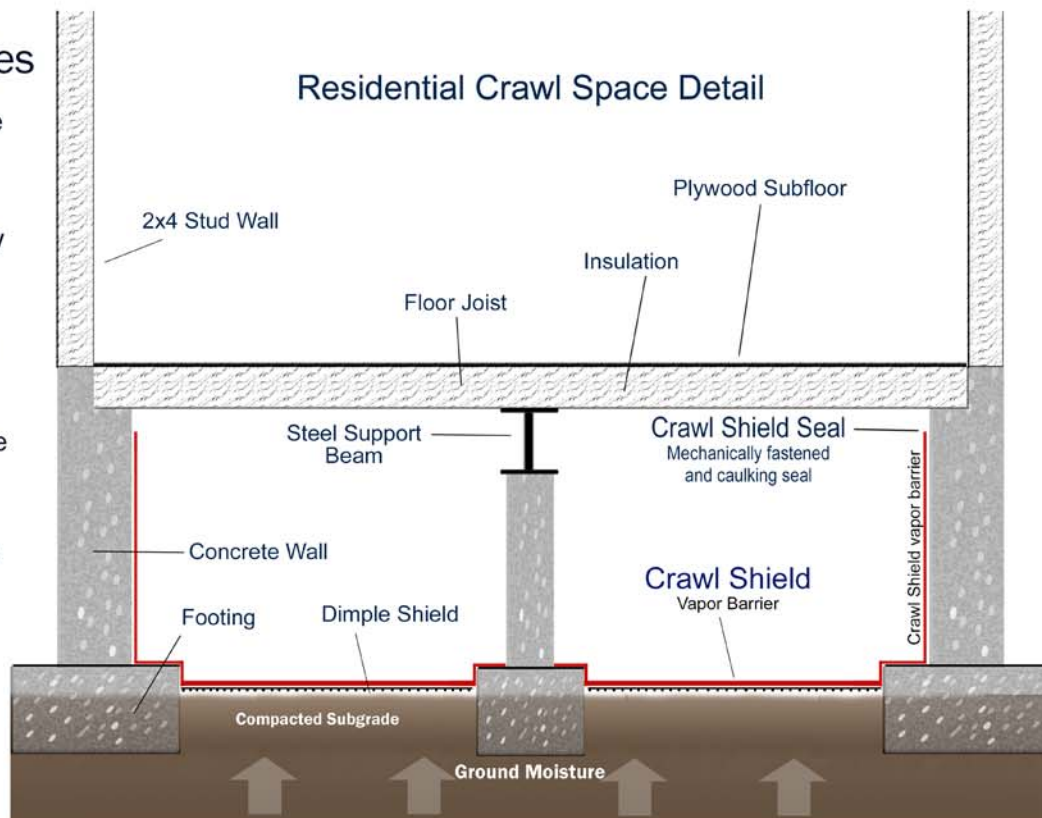

Greatly reduces condensation, mold growth, and poor air quality within a home or building.

Crawl space can be used for storage, due to high strength of Crawl Shield.

Crawl Shield gives a crawl space a bright clean look.

Crawl Shield is absolutely the best product on the market for a crawl space application.

Professional installations of Crawl Shield in about one day!
